The Problem

Problem statement

The Infant app is one place to get all information regarding products related to New Born Babies. Inside app will have the information of various categories and products offered by Company.

What customers do today

**Justify your effort to try to solve the problem.**

Most mothers hardly have time to go shopping for their babies, also they would be very fatigue, this app will help solve their problem.
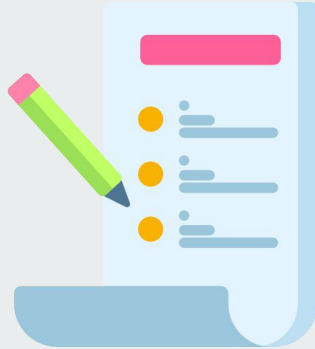

Requirements, Specification & Plan

Expected Output

01

1) The home page should show , the various categories offered by the company, such has Diapers, Toys, Clothes etc.
2) Each category should have various product listed in it

3) When you click on the project, it should open the project and show the detailed information about the product, like size and price

Requirements, Specification & Plan

The aim of the project is to design an Android app to help Women with new born babies shop easily in one place. We made use of Android Studio, with Java language, we used different types of view, such as ListView, CardView, Relative layout etc and a Corei5 7th Gen processor to run the following:

Softwares

INFANTO

- Run Android Studio
- Run Adobe Xd that we used for my UI / UX
- Run Powerpoint that we used to write my report
- Run Google chrome for checking of solutions to my bug
- Run Adobe illustrator we used to do our graphics work.

Users Guide

Julia
Teacher

- Make sure you have Android Studio installed
- Make sure you Open the project in your Android Studio
- Then run it with an Android Emulator

Wireframes

Start

Open the project in Android Studio

Working well?

YES

NO

Run the project on a virtual machine

REVIEW
I remember when I first had my baby, it wasn't easy going shopping for her or knowing what to buy for her, as I was always occupied at work and hardly ever had time to really shop for my baby, I told my colleague and then she told me about this app and since then it made my life easy.
